

## Table of Contents

|  |      |
|--|------|
| List of Tables   | viii |
| List of Figures  | ix   |
| 1 Statement of Problem   | 1    |
| 1.1 Transfer Maps and Lie Algebraic Tools                      | 1    |
| 1.1.1 Maps and nonlinear dynamics                              | 1    |
| 1.1.2 Hamiltonian for a charged particle                       | 3    |
| 1.1.3 Lie algebraic methods                                    | 4    |
| 1.2 Need for Analytic Representation of the Vector Potential   | 6    |
| 1.2.1 Finite difference methods                                | 7    |
| 1.2.2 Finite element methods                                   | 7    |
| 1.2.3 Boundary element methods                                 | 8    |
| 1.3 Inherent Analyticity and Use of Surface Data               | 9    |
| 1.3.1 Surface Fitting  | 11   |
| 1.4 Conclusion   | 12   |
| 2 Use of Circular Cylinder Surface                             | 13   |
| 2.1 Analytic Formulation                                       | 13   |
| 2.1.1 Determination of the Vector Potential                    | 13   |
| 2.2 Numerical Implementation                                   | 16   |
| 2.3 Benchmarks of Numerical Accuracy                           | 17   |
| 2.3.1 Monopole-Pair Benchmark                                  | 17   |
| 2.4 Insensitivity to Numerical Noise                           | 20   |
| 2.4.1 Theory of Smoothing                                      | 20   |
| 2.4.2 Error Estimates  | 25   |
| 3 Use of Elliptic Cylinder Surface                             | 29   |
| 3.1 Analytic Formulation                                       | 29   |
| 3.1.1 Determination of the Vector Potential                    | 29   |
| 3.1.2 Computation of Generalized Gradients from Field Data     | 31   |
| 3.2 Numerical Implementation                                   | 33   |
| 3.3 Benchmarks of Numerical Accuracy                           | 35   |
| 3.3.1 Monopole-Pair Benchmark                                  | 35   |
| 3.3.2 Application to ILC Wiggler                               | 36   |
| 3.4 Insensitivity to Numerical Noise                           | 42   |
| 3.4.1 Amplification of On-Axis Noise                           | 42   |
| 3.4.2 Study of Smoothing: Circular versus Elliptical Cylinders | 45   |
| 3.4.3 Relationship to the Circular Case                        | 49   |
| 3.4.4 Error Estimates  | 51   |

|         |   |     |
|---------|---|-----|
| 4       | Use of Rectangular Cylinders                                  | 59  |
| 4.1     | Analytic Formulation . . . . .                                | 59  |
| 4.1.1   | Convergence at the Boundary . . . . .                         | 61  |
| 4.1.2   | Analyticity/Singularity at Corners . . . . .                  | 64  |
| 4.1.3   | Determination of Generalized Gradients . . . . .              | 65  |
| 4.2     | Numerical Implementation . . . . .                            | 70  |
| 4.3     | Benchmarks of Numerical Accuracy . . . . .                    | 70  |
| 4.4     | Insensitivity to Numerical Noise . . . . .                    | 70  |
| 4.4.1   | Theory of Smoothing . . . . .                                 | 70  |
| 4.4.2   | Error Estimates . . . . .                                     | 73  |
| 5       | Use of General Surfaces                                       | 81  |
| 5.1     | Comments on Geometry and Separation of Variables . . . . .    | 81  |
| 5.2     | General Domains in $\mathbb{R}^3$ . . . . .                   | 81  |
| 5.3     | Analytic Formulation . . . . .                                | 85  |
| 5.3.1   | Helmholtz Decomposition Theorem . . . . .                     | 85  |
| 5.3.2   | Representation in Terms of Surface Data . . . . .             | 88  |
| 5.3.2.1 | Kernel for the Normal Component of $\mathbf{B}$ . . . . .     | 88  |
| 5.3.2.2 | Kernel for the Tangential Component of $\mathbf{B}$ . . . . . | 90  |
| 5.3.3   | Computing Transfer Maps from $\mathbf{A}$ . . . . .           | 95  |
| 5.4     | Numerical Implementation . . . . .                            | 96  |
| 5.5     | Benchmarks of Numerical Accuracy . . . . .                    | 97  |
| 5.5.1   | Monopole-Pair Benchmark . . . . .                             | 97  |
| 5.5.2   | Application to ILC Wiggler . . . . .                          | 99  |
| 5.6     | Insensitivity to Numerical Noise . . . . .                    | 99  |
| 5.6.1   | Error Estimates . . . . .                                     | 99  |
| 5.6.2   | Theory of Smoothing . . . . .                                 | 102 |
| 5.6.2.1 | Supplementary Result . . . . .                                | 105 |
| 6       | Application to Damping Rings                                  | 107 |
| 6.1     | Overview of the ILC . . . . .                                 | 107 |
| 6.1.1   | The Case for the International Linear Collider . . . . .      | 107 |
| 6.1.2   | Layout and Baseline Configuration . . . . .                   | 108 |
| 6.2     | ILC Damping Ring Design . . . . .                             | 110 |
| 6.2.1   | Radiation damping . . . . .                                   | 111 |
| 6.2.2   | Layout and parameters . . . . .                               | 113 |
| 6.3     | Dynamic Aperture . . . . .                                    | 118 |
| 6.3.1   | Single-particle dynamics . . . . .                            | 118 |
| 6.3.2   | Estimating dynamic aperture . . . . .                         | 119 |
| 6.4     | Computation of Transfer Maps . . . . .                        | 120 |
| A       | Amplification of Noise  | 121 |
| A.1     | Pitfalls of Numerical Differentiation . . . . .               | 121 |
| A.2     | Models of Noise . . . . .                                     | 125 |

|     |   |     |
|-----|---|-----|
| B   | Smooth Cubic Spline Interpolation                         | 133 |
| B.1 | Spline Spaces . . . . .                                   | 133 |
|     | B.1.1 B-Spline Basis . . . . .                            | 133 |
|     | B.1.2 Global Basis . . . . .                              | 136 |
|     | B.1.3 Change of Basis . . . . .                           | 139 |
| C   | Fast and Accurate Fourier Transform Algorithms            | 142 |
| C.1 | Overview of Fourier Transform Algorithms . . . . .        | 142 |
| C.2 | Statement of the Problem . . . . .                        | 144 |
| C.3 | Properties of the Space of Approximated Spectra . . . . . | 147 |
| C.4 | Development of Filon-Spline Formulae . . . . .            | 149 |
|     | C.4.1 Filon's Formula . . . . .                           | 149 |
|     | C.4.2 Filon-spline Formula . . . . .                      | 150 |
| C.5 | Discussion of Global Error Bounds . . . . .               | 151 |
| C.6 | Implementation . . . . .                                  | 152 |
| D   | Mathieu Functions   | 158 |
| D.1 | Definition and Properties . . . . .                       | 158 |
|     | D.1.1 General Solutions . . . . .                         | 163 |
|     | D.1.2 Asymptotic Forms . . . . .                          | 165 |
|     | D.1.2.1 Low-frequency regime $ q  < q_c$ . . . . .        | 166 |
|     | D.1.2.2 High-frequency regime $ q  > q_c$ . . . . .       | 169 |
| D.2 | Mathieu-Bessel Relations . . . . .                        | 171 |
| D.3 | Numerical Computation . . . . .                           | 174 |
| E   | Alternative Wiggler Fitting Techniques                    | 176 |
| E.1 | Idealized wiggler models . . . . .                        | 176 |
| E.2 | Fourier fitting . . . . .                                 | 176 |
| F   | Separability of Laplace and Helmholtz Equations           | 184 |
| F.1 | Preliminary Definitions . . . . .                         | 184 |
| F.2 | Application to the Helmholtz Equation . . . . .           | 186 |
|     | F.2.1 Separation of Variables . . . . .                   | 187 |
| F.3 | Application to the Laplace Equation . . . . .             | 190 |
|     | F.3.1 Separation of Variables . . . . .                   | 193 |
| G   | The Dirac Monopole  | 195 |
| G.1 | Basic Formulation . . . . .                               | 195 |
| G.2 | Properties of the Dirac String . . . . .                  | 199 |
| G.3 | Gauge Transformations . . . . .                           | 201 |
|     | G.3.1 A Choice of Gauge . . . . .                         | 203 |
|     | G.3.2 Transformations of the Ray Gauge . . . . .          | 204 |
