

What if I have a book on the table
and put a second book on the first?
Does the table need to push up more?

- 1. No. How would it know to do so?
- 2. Yes. It needs to hold up both books.
- 3. No. The reaction is to the book touching the table, not to both.
- 4. It depends on how you have put the second book down.
- 5. None of the above.
